Job Market Paper

Effects of a National Work Hours Restriction in a High Hours Country

This paper examines the effect of a new maximum work hour restriction introduced in South Korea in 2018 that limited maximum working hours from 68 h/week to 52 h/week. I use difference-in-differences analysis with continuous treatment measuring the prevalence of those working longer than 52 h/week prior to the policy change across industry-occupation-education groups. I find that the policy reduces work hours while increasing monthly earnings and hourly wages for male full-time workers. However, I find that the policy does not significantly affect total work hours, total employment, and total worker pay at the industry-occupation-education group level.

Teaching Experience

Teaching Assistant at University of Colorado Boulder

- Principles of Microeconomics, Fall 2017
- Principles of Macroeconomics, Spring 2018

Graduate Tutor at University of Colorado Boulder

- Microeconomic Theory 1 & Macroeconomic Theory 1, Fall 2018
- Microeconomic Theory 2 & Macroeconomic Theory 2, Spring 2019

Instructor of Record at University of Colorado Boulder

- Intermediate Macroeconomic Theory, Fall 2019, Spring 2020, Fall 2020, Fall 2021, Spring 2022
 - Intermediate Microeconomic Theory, Spring 2021
-

Projects

Predictions of Apartment Prices

- Collected xml format files of the transaction data for apartment sales in Seoul from January 2006 to December 2020 by using Python.
 - Built machine learning models to predict apartment prices in Seoul based on apartment and location features.
 - Trained supervised learning models such as Regressions, Random Forest, Gradient Boosting Decision Tree, along with hyperparameters chosen through Cross Validation.
-

Technical Skills

- Stata
 - R
 - Python
 - SQL
-

Language

- Korean (Native)
- English (Fluent)
